

BRANCH ORGANIZATIONAL CAPACITY TO ACT.20 (BOCA)

***Making strides towards building
stronger, better equipped and self-
sustainable KRCS Branches***

Staff Meeting, April 2026

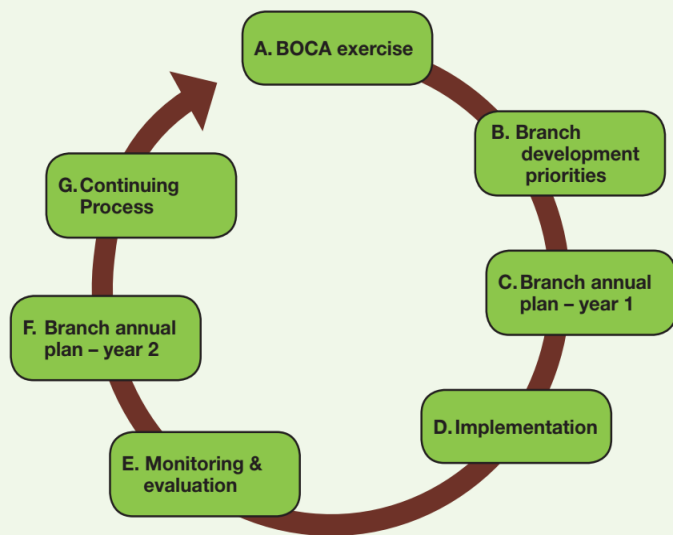

INTRODUCTION

- **SP2030 Ambition 2:** puts emphasis on having **Effective, Dynamic local capacities**, reinforcing branches as the **primary drivers of community-level programming**, ensuring they have the skills, systems, and tools necessary to lead local decision-making and deliver timely assistance.
- KRCS branches serve a critical role of ensuring **presence** and **accessibility** of humanitarian assistance to communities.
- NSD emphasis is on **Systematic development of branch capacities**; through governance structures, institutional development and local and international partnerships to ensure branches are **empowered, accountable, and sustainably resourced**.
- It is critical that the capacity of **basic KRCS functional units - the branches** - is strengthened and properly aligned to the **organizational strategic objectives**.

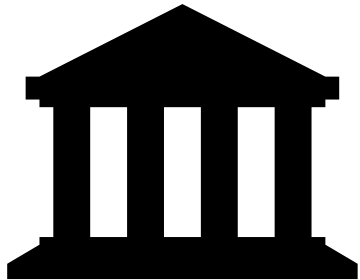

BOCA 1 Experience

- **Based on 5 capacities**; - to exist, to organise, to mobilise and relate, to perform and to grow. Focused on branches only and led to branch development plan and inform capacity building
- **BOCA.1 was a self-assessment tool developed for branches of NSs to identify and assess their strengths and weaknesses** in relation to a wide range of organizational capacities. Used as the first step in a branch development process focusing on basic capacities, structures and conditions that are widely understood as being the core of what a branch needs to be able to function and perform well.
- **BOCA.1 had 3 objectives**: 1. Appreciate organizational capacities of the branch and performance; 2. Reach a consensus on priorities for branch enhancement; 3. Develop an operational plan to strengthen and sustain its services delivery capacity and resilience of the communities.

Figure 1: Branch development process

BOCA 1 Experience

47 Branches developed their BDPs and reviewed annually.

Disparity in Branch development capacities across regions; branches exposed to cyclical calamities (floods, drought, conflicts and PHiEs). Bigger percentage of resources channelled towards response activities with little left for development and investment. Leading to resource and facility constraints.

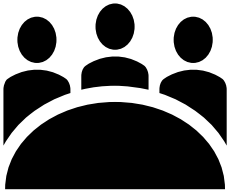

Despite widespread regional disparity in achievement, branches made tremendous improvements in governance, volunteers and members engagement and positioning of KRCS as lead humanitarian organization locally.

Weakness around staffing, volunteers' welfare (PPEs and safety), logistical gaps, audit and compliance. Disparity around physical and operational facilities and vehicles.

*Business Continuity in all our 47 Branches. Focus on developing business models to sustain our branches. IGAs and business entities in place. **Gaps identified in management of business entities and IGAs, loss of revenue through outdated practices and overreliance on traditional sources i.e. membership, trainings, mileage, tents/PA hire, 25% retention of income***

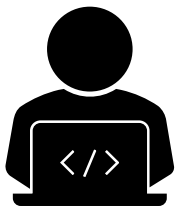

BOCA 1 Experience

- Approximately 320,000 youth, volunteers and members recruited to support the work of KRCS across all branches increasing local presence. **Gaps in youth and volunteers' engagement, lack of enough spaces, loopholes in volunteer motivation/incentives, MHPSS implications-duty of care, high demand of local KRC services.**

- Local partnerships, all 47 County Governors installed as patrons. Identification of area of cooperation with local government structures and local organizations. **Demand of KRCS services beyond the capacity of the organization to deliver. Over reliance of KRCS as a humanitarian actor. Branches focus turned to response.**

- Leadership and governance improvement. All 47 counties have active boards supporting decision making and leadership. Performance disparity recorded across the regions. **Gaps in Turn around time for decisions, frequency of meeting and attendance, boards peer review, conflict of interest and resource mobilisation.**

BOCA.20 Concept and Practice

The Branch Organisational Capacity to Act (BOCA) is a tool that helps unpack the vision of a strong branch. It is a participatory self-reflection exercise designed to empower branches to consider what it means to be a strong branch, see the bigger picture, identify strengths, as well as areas for improvement, and agree on development priorities. It is often the first step in a broader Branch Development process, laying the foundation for long-term transformation.

WHAT BOCA MEANS FOR BRANCHES

Participatory and Inclusive – *It brings together leaders, volunteers, and other stakeholders to build consensus on priorities and promote collective decision making.*

Self-Led and Strategic – *It enables branches to reflect on their own capacities and understand their role in the community, fostering ownership to drive growth and innovation. It encourages reflection on how the branch can continuously evolve and improve.*

Action-Oriented – *It results in a locally owned roadmap with concrete steps for strengthening the branch, enhancing volunteering, and enabling local action and service delivery. Follow-up, monitoring, and adaptation of this roadmap are key to achieving sustained impact.*

Motivating and Inspiring – *By clearly highlighting opportunities for growth, BOCA can energize branches and generate momentum for transformation. Success stories from one branch can inspire others.*

For a National Society, BOCA offers:

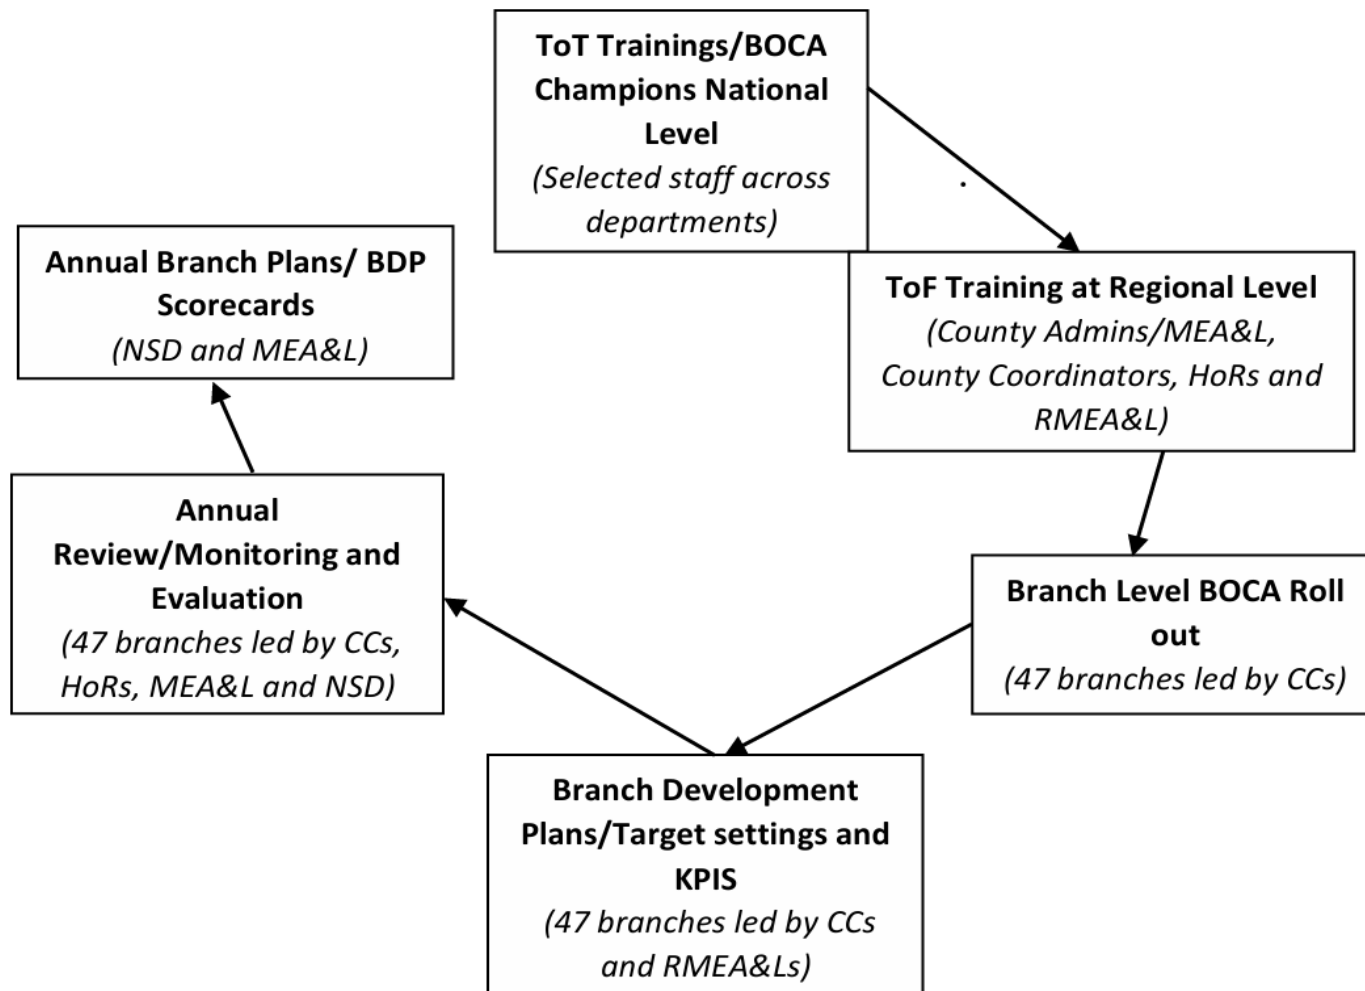

Shared alignment and direction – *It helps Branches develop a shared understanding of what a “strong Branch” looks like and builds alignment with the National Society’s overall vision, strategy, and direction.*

National overview – *When applied across branches, BOCA provides NHQ with a comprehensive overview of existing capacities which can help inform targeted support and peer learning, and guide investments.*

BOCA Plan 2026

Thank You
